ABSTRACT

This analysis examines the sales performance of D-Mart, a leading retail chain in India, with the aim of identifying patterns, trends, and factors influencing its sales. By analysing historical sales data, we explore seasonal demand variations, popular product categories, and customer demographics that impact revenue. The analysis uses key metrics, such as sales growth, average transaction value, and customer footfall, to assess D-Mart's performance across different locations and product segments. Findings reveal patterns in consumer behaviour, peak sales periods, and the impact of promotional strategies on sales. Additionally, insights into the effectiveness of D-Mart's pricing strategies and inventory management are provided, suggesting potential areas for improvement to maximize profitability and customer satisfaction. This study serves as a foundation for making data-driven decisions to optimize D-Mart's operational efficiency and sustain competitive advantage in the retail market.
